Assignments

1. Design a Flutter app for a Company Employee Login System using Employee Code and Password. If credentials are correct, show a Welcome Page with "Hello [Employee Name]"; otherwise, display an error message.

   - The Welcome Page has two options: Manager and Staff.
   - Clicking Manager takes the user to a Manager Page displaying "Welcome Manager", a briefcase icon, and a gray background.
   - Clicking Staff opens a Staff Page showing "Welcome Staff", a gear icon, and a cyan background.
   - Provide a Logout button to return to the login screen.

2. Create a TabBar with three tabs: Home, Messages, and Profile. Use TabBarView to display different content on each tab (e.g., a list of messages in the Messages tab and profile info in the Profile tab). Change the background color of each tab when it is selected.

3. Develop a Flutter app for an E-commerce Login System where a User ID and Password are required. If valid, redirect to a Welcome Page with a greeting "Hello [Username]"; otherwise, show an error. The Welcome Page has two buttons: Buyer and Seller. Clicking Buyer navigates to a Buyer Page with "Welcome Buyer", a shopping cart icon, and a purple background. Clicking Seller navigates to a Seller Page with "Welcome Seller", a storefront icon, and a brown background.Include a Logout button to return to the login page.
4. Write a program in Flutter to create four radio buttons to choose your preferred mode of transportation:
   - Car
   - Bike
   - Bus
   - Train

   Display the selected mode of transportation below the radio buttons

   with the message 'Your Selected Mode is: [mode]'

5. Create a custom button widget that takes text, color, and size as parameters. The button should have rounded corners and an animated press effect (such as a ripple effect when tapped). Use this custom button

in your main app to display a "Submit" button that changes color when pressed.

6. Create a Flutter app for a Student Login System. The login page should accept a Student ID and Password. If the credentials are valid, navigate to a Dashboard Page that displays a greeting message like "Hello, KK!". If credentials are invalid, show an error message.
   On the Dashboard Page, provide two Tabs: Undergraduate and Postgraduate. Clicking on the Undergraduate Tab, the control should navigate to the Undergraduate Page with the message "Welcome Undergraduate", a book icon in the center, and a green background. Clicking on the Postgraduate button should navigate to the Postgraduate Page with the message "Welcome Postgraduate", a graduation cap icon in the center, and a purple background.

7. Create a Flutter app with a Home Page that contains three buttons labeled Red, Green, and Blue. Clicking on each button should navigate to a respective page with the following conditions:

   - Red Page: Displays "Welcome to Red Page" with a red background.
   - Green Page: Displays "Welcome to Green Page" with a green background.
   - Blue Page: Displays "Welcome to Blue Page" with a blue background.

   Implement a Back to Home button on each page that redirects back to the home page. Also set the foreground and background colour of the buttons.

8. Design a Flutter app for an **Event Management System** where the Login Page accepts an Event ID and Password. If the entered credentials are valid, the user should be navigated to a Dashboard Page displaying the message “Welcome, Organizer!”, otherwise an appropriate error message should be shown. The Dashboard should provide two options: Concerts and Conferences. When the user selects Concerts, a form should be displayed to collect necessary details such as event name, date, and venue, and this data should be passed to the Concerts Page. The Concerts Page must display the title “Concert Events”, include a music note icon at the center, have a red background, and present the submitted details in a tabular format. Similarly, when the user selects Conferences, a form should be used to collect relevant conference details such as title, date,

and location, and the entered data should be forwarded to the Conferences Page. The Conferences Page should display the title “Upcoming Conferences”, include a microphone icon at the center, have a blue background, and show the submitted details in a tabular format.

9. Create a Flutter app with a custom TabBar with four tabs:

   Home (🏠 Icon)

   Search (🔍 Icon)

   Notifications (🔔 Icon)

   Profile (👤 Icon)

Each tab should show a corresponding screen with the title and an icon in the center. Also add the same theme for all the tabs.

10. Build a Flutter app for an Online Course Platform. The login page should accept a Username and Password. If credentials are correct, navigate to a Dashboard Page with a greeting message like "Welcome, Alex!". Otherwise, show an error message. The Dashboard should have two Radio button : Courses and Profile. Clicking Courses should navigate to a Courses Page with "Browse Available Courses", a book icon in the center, and a teal background. Clicking Profile should navigate to a Profile Page displaying "User Profile Details", a user icon in the center, and a pink background.
